Introduction

What is Beamer?

- Beamer is a LaTeX document class used to create presentations.
- It allows us to create structured slides.
- It supports equations, tables, figures and more.

Document and Page Styles

Document Class

- Defines the overall structure of a document.
- Examples:
  - article
  - report
  - book

Page Style

- Controls the appearance of headers and footers.
- Examples: plain, empty, headings and fancy.

Mathematical Equations

Beamer also supports mathematical expressions.

$$E = mc^2$$

$$\sum_{i=1}^{n} i = \frac{n(n+1)}{2}$$

Advantages

- Mathematical expressions are easy to format.
- Equations can be displayed clearly on slides.

Thank You!

Questions?

Key Takeaways

- Beamer is used to create presentations using LaTeX.
- Each slide is created using the frame environment.
- We can include text, equations, tables and figures.
