Abstract

This document demonstrates the basic structure of a LaTeX document. It covers document classes, title formatting, and the abstract environment.

1 Introduction

LaTeX provides different document classes depending on the type of document being created.

2 Document Classes

The document class determines the overall structure and behavior of a document.

Some commonly used document classes are:

- **article**: Used for short documents, papers and reports without chapters.
- **report**: Used for longer documents that require chapters.
- **book**: Used for books and theses, supporting chapters and front and back matter.

2.1 Choosing a Document Class

The document class is specified using \documentclass.

For example:

```
\documentclass{article}
\documentclass{report}
\documentclass{book}
```

We can also specify font size and paper size:

```
\documentclass[12pt,a4paper]{article}
```

3 Customizing the Title

We can customize the title and author using formatting commands.

```
\title{\Huge\bfseries My Document}
\author{\Large Sahil Kumar}
\date{\today}
```

Additional information can be placed below the title.

Supervisor: Faculty Name
Course: Technical Writing

4 Abstract

The abstract environment provides a short summary of the document.

It is generally placed after the title and before the main content.

5 Bibliography and Citations

BibTeX helps us manage references using a separate bibliography file.

We can cite a book using the cite command [**?**].
